19/80

Firano Zakaria

**University Mohammed 5
Rabat**

Improve my knowledge about big data.

Since I joined the central bank of Morocco in 2008, I was seduced by research and especially the use of statistics in decision-making. This allowed me to start my career as a young researcher in finance and economics, the goal of which is to succeed in answering the major problems of my country and the global economy in general.

Currently professor and researcher at the university my ambition is to become a famous researcher. It was a pleasure to join ISI in 2017 and to know that this community is fighting for the power of knowledge in all areas of science. Happy to be here and together to move forward.

Looking forward to collaborating in the future.

21/80

Gajendra Kumar Vishwakarma

**Indian Institute of Technology
(ISM) Dhanbad**

I am an elected member of International Statistical Institute since 2007. I work in the area of computational statistics and use to develop models for solving the real world problems. During developments of such models we use to encounter bayesian statistics which are to be solved under some conditions analytically or numerically by using certain techniques and software. Now-a-days some latest techniques and methodology are available to be used for computation using suitable computation software. Some of recent techniques may be discussed in young statisticians workshop by the eminent academicians. Learning such techniques will certainly provide a new dimension to my thought process and may enhance the landscape of research. Moreover, it will also provide an interactive atmosphere where research collaboration with researcher and scientist from prestigious institutions of the country may possibly be nurtured.

Mohammad Illyas Sidik

Universiti Teknologi Mara (UiTM)

WSC are great opportunities not only for researchers and scientists, but also for students. Attending conferences, especially the international ones, gives me chance to hear different points of view and learn new ideas and trends in Statistics field. They also provide me with new techniques, new types of equipment, data that is yet to be published, and investigators that I may not have heard of. Conferences are priceless chances to sharpen my knowledge by learning new skills in a different environment. Moreover, WSC allows me to learn new information and skills from hearing others' presentations, and also can converse with other researchers from different universities and countries. WSC are great opportunities to connect with attendees from different perspectives and views, learn from them, make new connection, and strengthen existing ones. Conferences pave the way for scientific cooperation by meeting and connecting with researchers from different countries.

Manik Awale

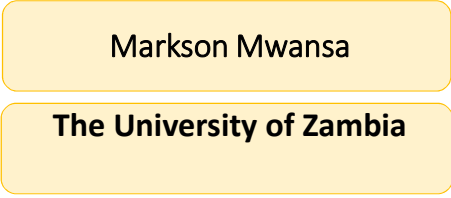

**Savitribai Phule Pune
University**

I will be representing My University and Indian Statistical Association (ISA) in this Conference. This workshop will help me to get new ideas in research. Some of the ideas discussed can be replicated in India to increase the statistical literacy as well as research output. It will help to create new networks among the young statisticians. If feasible, we may try to organize such a conference/workshop in India through ISA.

Hello friends, nice to see you all here. Lets work together for better statistics and for the betterment of the society.
Best wishes for your endeavours from me and my Savitribai Phule Pune University.
